

14001502 / 2014CS150 PHP assignment

Inquiry management system for EDULINK institute.

Insert Query

1. Uploadresults page: Inserting images and files (pdf) to the web site. User should enter images of result sheets of A/L exam and O/L exam. It is done by inserting links of images to the database in the query.

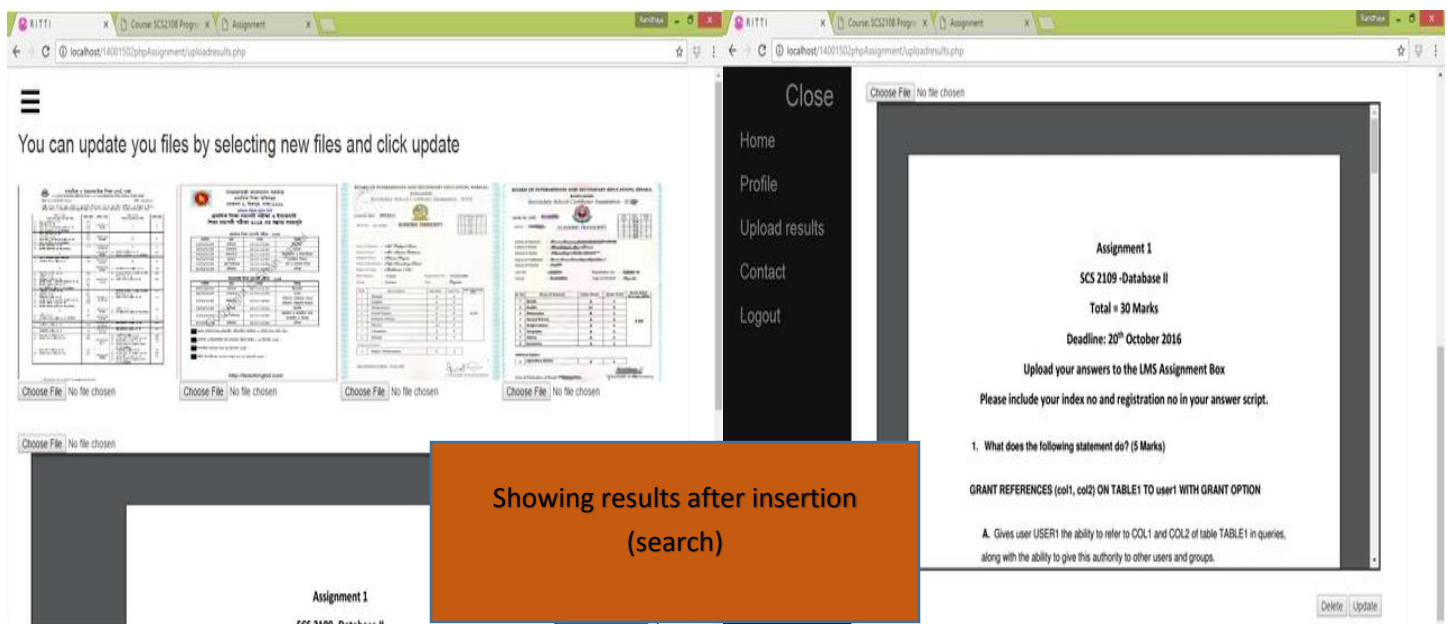

Insert Page.
Choose file in here
and click post
button.

Problems:

- Troubles in loading links of images to the database.
 - Solved by assigning image links by the concatenating image name file location and storing those links in the database tables.

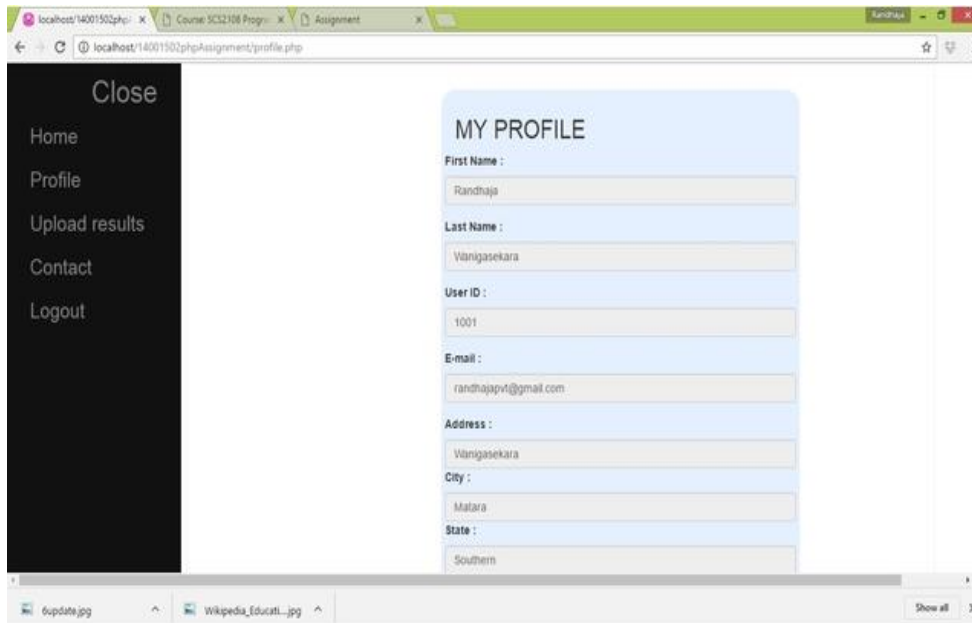

Search Query

1. Uploadresults page. : Showing images of the certificates of A/L and O/L Showing any other relevant documents only if previously uploaded in to thee system.

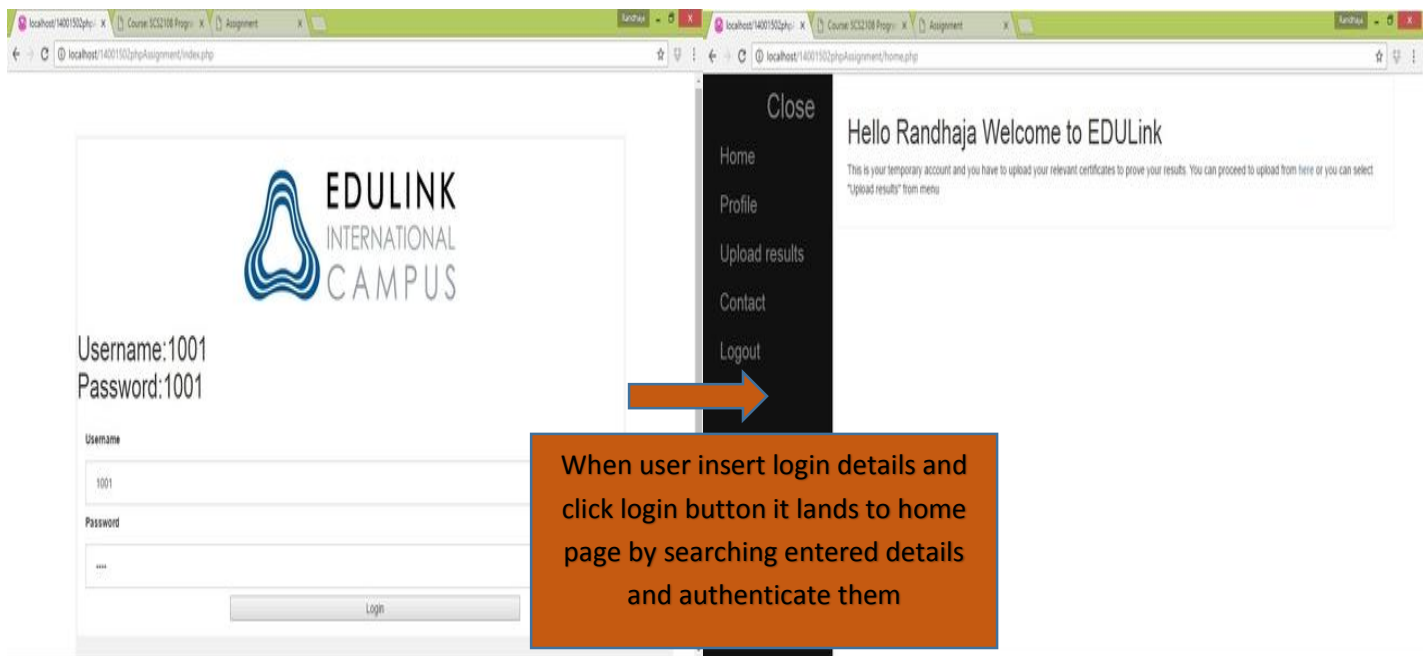

Problems:

- Troubles in reading images links and opening the relevant images.
 - Solved by echoing images links which retrieved from database to an image tag's src attribute.
2. Profile page. : Loading user's information in to a form as a profile info page.

When user selects profile from the menu it shows user profile information.

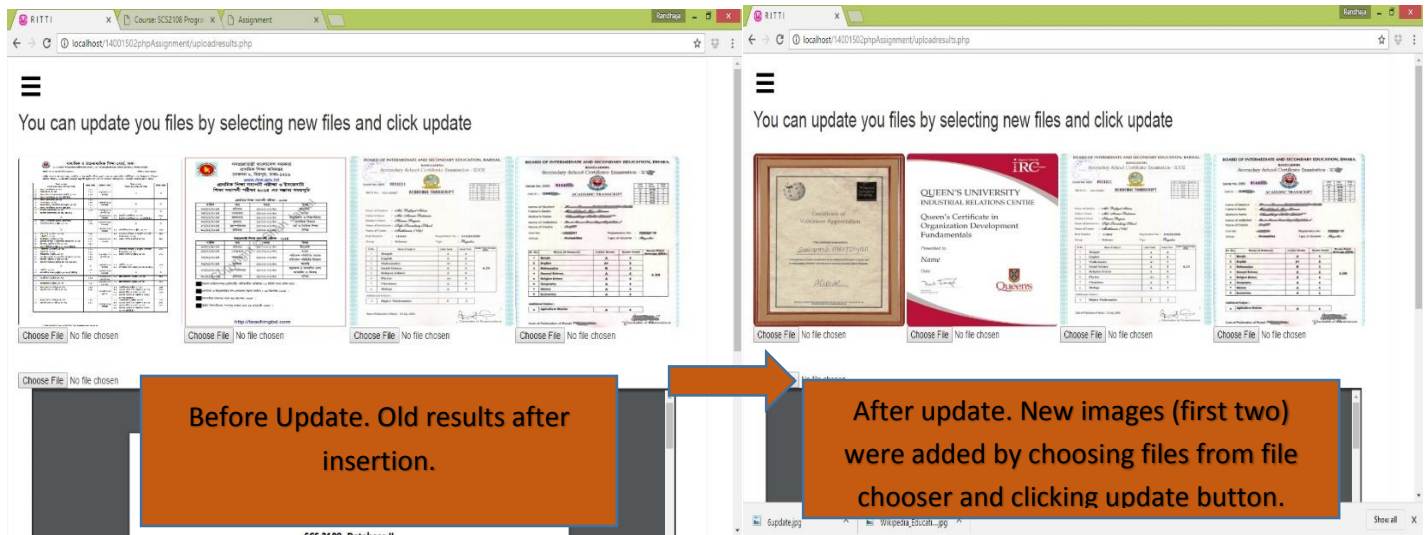

3. loginhandle page. : After inserting username and password to index page, logging in to the system using loginhandle page.

When user insert login details and click login button it lands to home page by searching entered details and authenticate them

Update query

1. Uploadresults page: When there are images added previously update button is visible and you can select new files to add and then click update to upload new images.

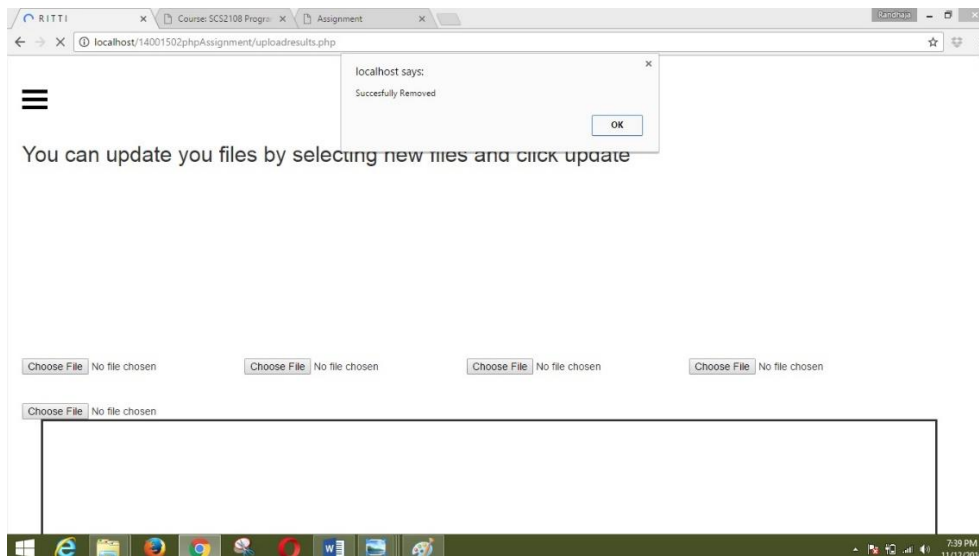

Problems:

- Adding data to the same user fields in database.
 - Solved by keeping user id(primary key) in a session variable.

Delete Query

1. Uploadresults page: Deleting images and files of the user which user previously added. After clicking delete button all data will be deleted and insert page will be visible.

After click delete button all records were deleted and it shows an alert about the deletion.

Problem

- A method to let user that the record have been successfully deleted or not.
 - Solved by alerting the deletion message using simple javascript.
